GAS STERILIZATION

- Uses ethylene oxide to sterilize
- Must be certified to use it
- It is a colorless, odorless and **POISONOUS** gas that attacks the cellular proteins and nucleic acids of microorganisms.
- Used for plastic and rubber instruments

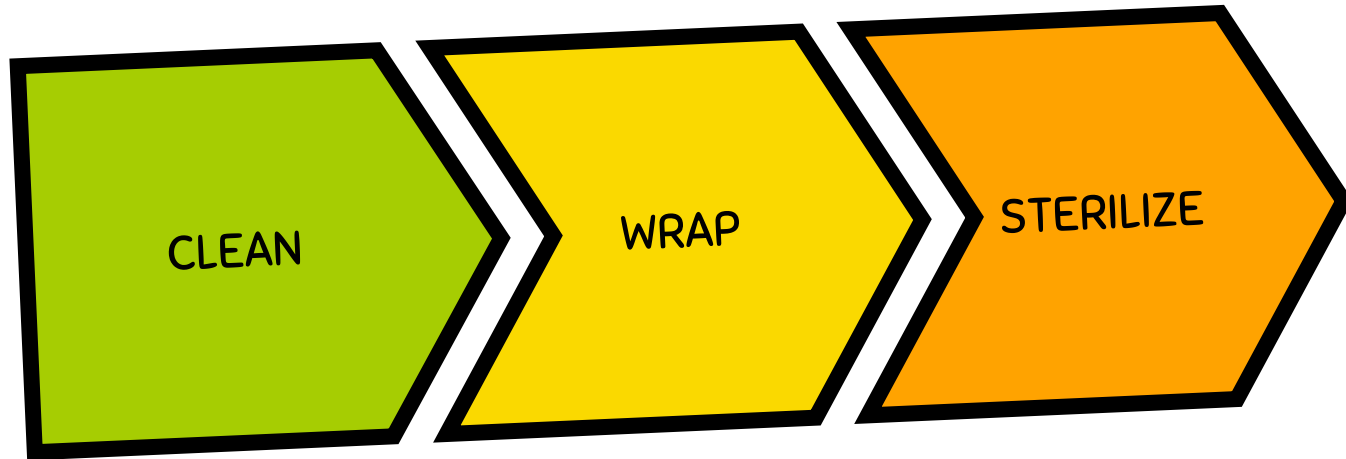

STEAM STERILIZATION

- Uses high temp & high pressure steam to sterilize
- Must use distilled H₂O
- This is for packs & pouches
- Used for non-plastic instruments

OUR PROCESS IS EASY

THANKS!
